

LED LIGHTING
SOLUTIONS

Toshiba LED Lighting gives you nothing but pure light.

At Toshiba, we're illuminating the world by introducing lighting technology that gives you everything you want and nothing you don't. That's why we like to think of it as pure light. Our LED lighting uses powerful technology born of 120 years of lighting heritage combined with our limitless electronics knowledge. We are 100% focused on LED lighting and committed to making it the prominent technology in the lighting industry. Using our extensive experience in both the electronics and lighting industries, we are transforming the lighting landscape in a way no one else can.

We give you sustainable lighting.

LED technology is forever changing the disposable notion of lighting. Our LED lighting products last up to 40 times longer than incandescents, which reduces landfill waste. Plus our LED lights don't contain lead or mercury, are manufactured using recycled/recyclable materials and use up to 80% less energy compared to incandescents. At Toshiba, we're leaving old lighting technology behind and moving forward with high quality lighting that has less of an environmental impact.

We give you the right lighting to meet your needs.

Our breadth of products gives you a variety of lumen outputs, color temperatures and distributions. That way you can find the right light for the right application. Take our powerful new PAR30 for instance: it provides 800 lumens and is available in three color temperatures and three beam angles. And our LED lamps emit up to 70% less UV light than halogens, so they cause less damage to the objects they illuminate. With our innovation, we truly believe there is no limit to what LED lighting can do.

We give you legendary quality.

At Toshiba, we take great pride in our reputation for high standards and reliable, innovative products. Our technology carries on that tradition by boosting the performance and efficiency of our LED lighting from the inside out. So now the same company that's known worldwide for delivering quality laptops, televisions and other electronics will be just as well known for high-quality LED lighting. We have dedicated 100% of our efforts to LED technology, and it's that commitment combined with our expertise that is changing the way everyone thinks about lighting.
