

TX4961XBG-240 64-bit RISC Processor with Integrated Graphics and Display Controller

Highlights

- 64-bit TX49/H3 MIPS-compatible CPU runs large code base
- High integration reduces parts count and increases reliability
- Automotive/industrial temperature range
- 24-bit true color pixels with 8-bit alpha blending on all operations enables very high quality displays
- Graphics scheduler offloads CPU by reading display list commands directly from memory and dispatching operations to the hardware acceleration engines
- 5-layer graphics architecture eases task of managing overlays
- Transformation Engine can implement rotating display elements like indicator needles
- Blitting engine can perform font expansion and scaling
- Many basic graphics operations implemented in hardware
- ADC and PWM outputs can control LCD brightness and contrast

Description

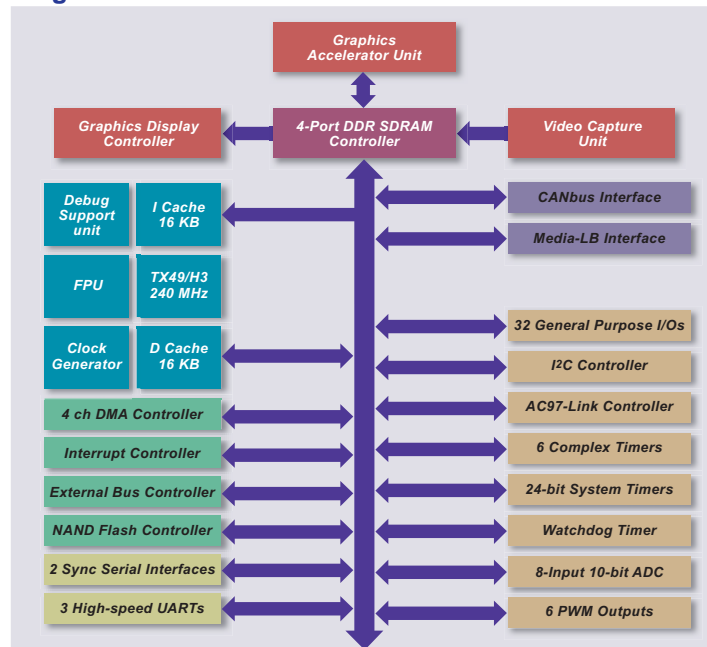

The TX4961 is designed for applications that combine general purpose computing with real-time graphic displays, such as driver information systems, car infotainment systems and car navigation systems. It integrates a TX49/H3 64-bit MIPS RISC CPU with a display controller and hardware graphics accelerators in a single system-on-a-chip IC. The integrated DDR SDRAM controller, unified memory architecture and multiple on-chip buses are designed to ensure that each on-chip subsystem has the memory bandwidth it needs.

The TX4961 also integrates a video frame grabber, AC-Link and I²C controllers, various timers and high-speed serial ports, 10-bit ADC, 16-bit PWM outputs, GPIO ports, and CANbus and Media-LB interfaces with DMA, interrupt, external bus, and NAND FLASH controllers.

Features

- 240 MHz TX49/H3 CPU core
 - 16 KB Instruction cache
 - 16 KB Data cache
- Integrated IEEE754 single and double precision FPU
- MMU with 48-entry TLB
- Graphics display controller:
 - 24-bit true color pixels
 - 4 display planes
 - Hardware cursor to 64 x 64
- Hardware 8-bit alpha blending
- Hardware format conversion
- Hardware clipping windows
- Hardware antialiasing to 1/16 sub-pixel resolution
- Blitting Engine for moving, scaling, font expansion
- Transformation engine for 2D linear transforms
- Rotation Engine

- Line-Drawing Engine
- Frame Grabber
 - 16- or 8-bit RGB, or YCbCr
 - ITU-R 601/709 conversion
 - Frames up to 1024 x 512
 - Cropping and dotwise scaling
- External bus for 16-bit SRAM, ROM, NOR FLASH
- DDR SDRAM controller
 - 32/16-bit data, 2 channels
- DMA controller
- Interrupt controller
- NAND FLASH controller with HW ECC calculation
- Media-LB interface
- AC97-Link controller with 4-ch DMA
- I²C controller
- 3 high-speed UARTs
- 2 ESIE ports (SPI) with FIFOs
- 3 ch CAN-bus controller with 16 mailboxes each
- 30 general purpose IO pins
- 8 ch 10-bit ADC
- 6 x 16-bit PWM timers
- 6 x 16-bit complex timers
- 24-bit system timer
- Watchdog timer
- 4KB/4KB internal RAM/ROM
- On-chip clock and reset generators
- Halt, doze and standby power-down modes
- 130 nm process technology
- 456-pin PBGA, 1mm ball pitch
- -40°C to 85°C ambient operating temperature

OS / Development Tools

- RBTX4961 Reference Board
- Greenhills Software
- Wind River Systems (under development)

* The information contained herein is subject to change without notice.

* The information contained herein is presented only as a guide for the applications of our products. No responsibility is assumed by TOSHIBA for any infringements of patents or other rights of the third parties which may result from its use. No license is granted by implication or otherwise under any patent or patent rights of TOSHIBA or others.

* TOSHIBA is continually working to improve the quality and reliability of its products. Nevertheless, semiconductor devices in general can malfunction or fail due to their inherent electrical sensitivity and vulnerability to physical stress. It is the responsibility of the buyer, when utilizing TOSHIBA products, to comply with the standards of safety in making a safe design for the entire system, and to avoid situation in which a malfunction or failure of such TOSHIBA products could cause loss of human life, bodily injury or damage to property. In developing your designs, please ensure that TOSHIBA products are used within specified operating ranges as set forth in the most recent TOSHIBA products specifications. Also, please keep in mind the precautions and conditions set forth in the "Handling Guide for Semiconductor Devices," or "TOSHIBA Semiconductor Reliability Handbook" etc.

* The Toshiba products listed in this document are intended for usage in general electronics applications (computer, personal equipment, office equipment, measuring equipment, industrial robotics, domestic appliances, etc.). These Toshiba products are neither intended nor warranted for usage in equipment that requires extraordinarily high quality and/or reliability or a malfunction or failure of which may cause loss of human life or bodily injury ("Unintended Usage"). Unintended Usage include atomic energy control instruments, airplane or spaceship instruments, transportation instruments, traffic signal instruments, combustion control instruments, medical instruments, all types of safety devices, etc. Unintended Usage of Toshiba products listed in this document shall be made at the customer's own risk.

* The products described in this document may include products subject to foreign exchange and foreign trade laws.

* The products contained herein may also be controlled under the U.S. Export Administration Regulations and/or subject to the approval of the U.S. Department of Commerce or U.S. Department of State prior to export. Any export or re-export, directly or indirectly in contravention of any of the applicable export laws and regulations, is hereby prohibited.
