

TOSHIBA MOTORS & DRIVES

G1 SERIES DRIVE RUNS FOR 30+ YEARS

LOCATION: CITY OF GADSDEN WATER WORKS

SUCCESS STORY:

In 1987 the City of Gadsden Water Works in Alabama installed three 150 HP G1 Series adjustable speed drives (ASD) that are still pumping water today.

“I wish everything lasted like these drives do,” said Tony Martin, maintenance supervisor at Gadsden Water Works. “We’ve had very few problems and are very well pleased.”

The G Series drives are renowned for durability and reliability. The G9 is the current update to the product line and is designed for severe duty and constant torque.

Toshiba International Corporation has manufactured ASDs in the U.S. since 1981 and currently provides a full line-up of low and medium voltage motors, drives, and motor controls.

“The G1 drives at Gadsden are a prime example of what Toshiba values, which durability and reliability,” said John Rama, business director for the TIC Motors & Drives division. “All Toshiba drives are built to last, and the rugged G1 is a testament to that reliability.”
